

# Vision and Principles Statement for St. Clare's Catholic Primary School

## Our Vision for Science

At St. Clare's Catholic Primary School, we provide a progressive science curriculum teaching and inspiring our pupils to aim high and achieve their best.

With God's guidance, we encourage our pupils to think like scientists, investigate, question and explore with confidence in a safe and secure environment.

Children are encouraged to discover for themselves.

Children are inspired to be real scientists by enthusiastic teachers and visitors.

Children talk and share their ideas openly in a supportive environment and are encouraged to use scientific vocabulary accurately and with confidence.

Children confidently ask open-ended questions and can find answers to those questions through researching, planning and carrying out their own investigations.

Children are excited and look forward to their weekly science lessons.

Learning also takes place outside the classroom such as in our Forest School Area and within the school grounds.
